

Wiki Asset Serving — Credentials & Access Handoff

Tiny Door Studios · kb.tinydoorstudios.com · 2026-06-11

This document covers every credential, path, and command needed to access, maintain, or rebuild the Live Sound KB wiki and its static asset serving pipeline. **Keep this secure.** The GitHub PAT listed here is compromised and must be rotated — see Open Items.

Network Topology

Browser → Cloudflare (tunnel b1e6581d) → n8n VM nginx :8088 → Wiki.js CT :3000

/assets/ requests → n8n VM nginx :8088 → /kb-assets/ bind mount (served directly)

Host	IP / Address	Role
TDS Proxmox	100.99.198.22 (Tailscale)	Hypervisor – Proxmox
n8n VM	192.168.200.84	nginx landing, n8n, cloudflared
Wiki CT 101	192.168.200.126	Docker: Wiki.js + Postgres

SSH Access

Target	Command
TDS Proxmox host	ssh tds (SSH config alias → 100.99.198.22 via Tailscale)
n8n VM (brian)	ssh -J tds -i ~/.ssh/proxmox_tds brian@192.168.200.84
Wiki CT 101 shell	ssh tds then: pct exec 101 -- bash
Wiki CT one-liner	ssh tds 'pct exec 101 -- bash -c "<cmd>"'

SSH key: `~/.ssh/proxmox_tds` (passwordless sudo on n8n VM)

Credentials

Service	Username / Key	Password / Value	Notes
Wiki.js admin	tinydoorstudios@gmail.com	WikiKBmemo2026	Web UI login
Wiki basic auth	tds	OrangeDog24!	nginx HTTP Basic Auth
Wiki Postgres	wiki	wikidbpass	DB: wiki (LAN only)
GitHub PAT	TinydoorStudios	ghp_CZLitygHs6Ch7xXVhRmLS475Ztw0Uq40MPK0	COMPROMISED – rotate now
Cloudflare tunnel	b1e6581d	(remote-managed)	Account: fbbee704...

■ **GitHub PAT above has been exposed in chat logs. Rotate it at GitHub → Settings → Developer Settings → PATs before any other maintenance. After rotating: update Wiki.js storage config (GraphQL) and the local git remote URL.**

URLs & Endpoints

URL	What
-----	------

https://kb.tinydoorstudios.com	Wiki public (behind basic auth)
https://n8n.tinydoorstudios.com	n8n (behind basic auth)
http://192.168.200.126:3000/graphql	Wiki.js GraphQL API – use LAN IP direct (Cloudflare blocks mutations)
http://192.168.200.126:3001	kb-assets nginx sidecar (now unused, can be removed)

Key File Paths

On Brian's Mac:

Path	What
/Users/brianlloyd/Documents/Claude/audio/LiveSoundKB/Wiki/	Local KB/Wiki/ (launchd watches this)
/Users/brianlloyd/Documents/Claude/audio/LiveSoundKB/Wiki/shows/	Downloaded show files – rsynced to n8n VM on push
~/ .claude/scripts/kb-git-push.sh	Auto-push script (commit + push + rsync)
~/ .claude/logs/kb-git-push.log	Push script log
~/Documents/Claude/audio/N8n/deploy-wiki-assets/	Full deploy/fix script for asset serving

On n8n VM (192.168.200.84):

Path	What
/opt/landing/docker-compose.yml	Landing nginx compose
/opt/landing/nginx.conf	Landing nginx config (all vhosts)
/opt/landing/.htpasswd	Basic auth credentials file
/opt/kb-assets/	Downloaded show files – served as /assets/ by nginx

On Wiki CT 101 (192.168.200.126):

Path	What
/opt/wikijs/docker-compose.yml	Wiki.js + Postgres + sidecar compose
/opt/wikijs/nginx-assets.conf	Sidecar nginx config (served on :3001, currently unused)
/wiki/data/repo/	Git repo clone (inside wiki container, ephemeral – not in volume)
/wiki/data/content/	Docker volume mount (vol: 6bc3c709...) – persisted

Architecture — How Asset Serving Works

Files committed to **Live Sound KB/Wiki/assets/shows/<slug>/** on the Mac are pushed to GitHub by the launchd agent, and *also* rsynced directly to **/opt/kb-assets/** on the n8n VM. The landing nginx container has /opt/kb-assets bind-mounted at /kb-assets and serves it under the /assets/ location for kb.tinydoorstudios.com. No wiki container involvement at serve time.

Wiki.js pulls .md files from GitHub into Postgres for display. Binary files (.ses, .pdf, .xlsx) are served statically from the n8n VM — completely separate from Wiki.js.

Useful Commands

Force git sync on Wiki.js (skip the 5-min wait):

```
ssh tds 'pct exec 101 -- curl -s -X POST http://127.0.0.1:3000/graphql \ -H "Content-Type: application/json" \ -d \{"query":"mutation{storage{executeAction(handler:\\\"git\\\",targetKey:\\\"sync\\\"){succeeded}}}"\}'
```

Manually rsync assets to n8n VM:

```
rsync -av --delete \ -e "ssh -J tds -i ~/.ssh/proxmox_tds" \ "/Users/brianlloyd/Documents/Claude/audio/Live Sound KB/Wiki/assets/" \ "brian@192.168.200.84:/opt/kb-assets/"
```

Reload landing nginx after config change:

```
ssh -J tds -i ~/.ssh/proxmox_tds brian@192.168.200.84 \ 'sudo docker exec landing nginx -t && sudo docker exec landing nginx -s reload'
```

Restart wiki stack (CT 101):

```
ssh tds 'pct exec 101 -- bash -c "cd /opt/wikijs && docker compose restart"'
```

Test a download URL from terminal:

```
curl -s -o /dev/null -w "%{http_code}" \ -u "tds:OrangeDog24!" \ "https://kb.tinydoorstudios.com/assets/shows/"
```

Open Items

Priority	Item	Notes
HIGH	Rotate GitHub PAT	ghp_CZLi... is compromised. After rotating: update Wiki.js GraphQL storage conf
MED	Change Postgres password	wikidbpass is default. Update docker-compose env and running DB. LAN-only so lo
MED	Git repo is ephemeral	Wiki container stores the git clone at /wiki/data/repo/ (NOT in the Docker volu
LOW	Remove kb-assets sidecar	The nginx:alpine sidecar on port 3001 is no longer used. Can remove from docker
LOW	Consider SSH deploy key	Replace PAT with an SSH deploy key for Wiki.js git storage – no token rotation
