

Audio Archive Sync — Setup Instructions

Reaper PC → NAS nightly backup with TrueNAS email report

Overview

Two scripts work together each night:

2:00 AM — Reaper PC (PowerShell) scans `A:\2026` , copies new session folders to the NAS (`Z:\`), deletes folders older than 5 days from the PC, and writes a log to `Z:\sync-logs\` .

3:00 AM — TrueNAS (bash) reads today's log and emails a summary to `tinydoorstudios@gmail.com` .

Part 1 — Reaper PC Setup

Step 1: Place the PowerShell script

Copy `audio-archive-sync.ps1` to a permanent location on the Reaper PC. Suggested path:

```
C:\Scripts\audio-archive-sync.ps1
```

Create the `C:\Scripts` folder if it doesn't exist.

Step 2: Allow PowerShell scripts to run

Open PowerShell as Administrator and run:

```
Set-ExecutionPolicy RemoteSigned -Scope LocalMachine
```

This is a one-time setting. It allows local scripts to run without requiring a digital signature.

Step 3: Create the Scheduled Task

- Open **Task Scheduler** (search in Start menu)
- Click **Create Basic Task** in the right panel
- Name it: `Audio Archive Sync` → click Next
- Trigger: **Daily** → Next
- Start time: **2:00 AM** → Next
- Action: **Start a program** → Next

→ Program: `powershell.exe`

→ Add arguments:

`-NonInteractive -ExecutionPolicy Bypass -File "C:\Scripts\audio-archive-sync.ps1"`

→ Click Finish

After creating it, right-click the task → **Properties** → **General** tab → check "**Run whether user is logged on or not**" and "**Run with highest privileges**". This ensures it runs even if no one is logged in.

Note: The NAS must be mounted as `Z:` for this to work. If `Z:` is mapped via a login script or manually, make sure the drive is configured to reconnect at sign-in — or add a `net use` command at the top of the PowerShell script to remount it if needed.

Part 2 — TrueNAS Setup

Step 1: Create the scripts folder on the NAS

SSH into TrueNAS (or use the Shell in the TrueNAS web UI) and run:

```
mkdir -p /mnt/AudioNas/Audio/scripts
chmod 755 /mnt/AudioNas/Audio/scripts
```

Step 2: Copy the bash script to TrueNAS

Copy `audio-sync-report.sh` to the TrueNAS at:

```
/mnt/AudioNas/Audio/scripts/audio-sync-report.sh
```

Then make it executable:

```
chmod +x /mnt/AudioNas/Audio/scripts/audio-sync-report.sh
```

Step 3: Add the cron job in TrueNAS UI

→ Go to **System** → **Advanced** → **Cron Jobs**

→ Click **Add**

→ Description: `Audio Sync Email Report`

→ Command: `/mnt/AudioNas/Audio/scripts/audio-sync-report.sh`

→ Run As User: `root`

→ Schedule: **Custom** → Cron expression: `0 3 * * *` (3:00 AM daily)

→ Enable: checked → Save

Part 3 — Verify It's Working

Test the PowerShell script manually

On the Reaper PC, open PowerShell and run:

```
powershell.exe -ExecutionPolicy Bypass -File "C:\Scripts\audio-archive-sync.ps1"
```

Check that a log file appears at `Z:\sync-logs\sync-YYYY-MM-DD.txt`.

Test the TrueNAS email script manually

In TrueNAS shell, run:

```
/mnt/AudioNas/Audio/scripts/audio-sync-report.sh
```

You should receive an email within a few minutes.

What the Nightly Email Looks Like

```
Audio Archive Sync Report – 2026-06-03
=====

COPIED TO NAS  (2 folder(s), 4823.5 MB / 4.712 GB)
-----
  2026-06-01 Orchestra Recording  (3102.4 MB)
  2026-06-02 Rehearsal Mix        (1721.1 MB)

DELETED FROM PC  (1 folder(s))
-----
  2026-05-28 String Quartet

Run completed: 2026-06-03 02:04:17
```

Script Logic Reference

The PowerShell script checks folder age based on **creation time**. Folders created less than 3 days ago that aren't on the NAS get copied. Folders older than 5 days on the PC get deleted — regardless of whether they've been copied (the assumption is that anything 5+ days old has already been archived on a prior night).

If you want to change the thresholds, edit these two lines near the top of `audio-archive-sync.ps1` :

```
$copyAgeDays    = 3    # copy folders newer than this  
$deleteAgeDays = 5    # delete folders from PC older than this
```
