

Seventh Heaven Pro

Preset Reference & Tweak Notes

LiquidSonics' Fusion-IR recreation of the Bricasti M7 — every preset from the hardware (V1 and V2 firmware), plus the four Nonlinear programs and the Todd-AO SM Interiors bank. 236 presets across 12 banks.

This document is a working reference: what each preset is, what it's good for, and what to tweak. Built from the LiquidSonics preset spec sheet, the Bricasti M7 owner's manual, and engineer/forum recommendations.

Orientation

The plugin and the box

The M7 is an algorithmic reverb, not a convolution unit — but its tails are dense enough that most ears can't tell. Seventh Heaven Pro samples the M7 with Fusion-IR, a multi-IR technique that captures modulation and time-variant behavior that a single static IR can't. The result is the M7 sound with plugin-level editing depth.

V1, V2, and Nonlinear

V1 is the original M7 firmware: hyper-realistic, low modulation, very accurate small-to-medium spaces. The 'pure' Bricasti sound — orchestral, classical, jazz, anything where you want the source to keep its character. **V2** is the 2010 firmware update: brighter, more modulated, lush — closer to a Lexicon 480 in feel, intended for pop/rock/cinematic work where you want bloom. **Nonlinear** is the M7's nod to the AMS RMX16 — gated/reverse-style envelopes, not a literal emulation. Pro's preset banks tagged '2' (Halls 2, Plates 2, Rooms 2, Spaces 2) use the V2 algorithm.

The control set

Beyond Reverb Time, Size and Pre-Delay you get Diffusion, Density, Modulation, low-pass Rolloff, two-band frequency-dependent decay (HF/LF multiplier + crossover), a VLF cut for the very bottom, Early/Late mix, Early Rolloff, and Early Select (32 reflection patterns in four subsets — see Tweak Playbook). Pro adds five EQ bands, a tail ducker, tempo-synced pre-delay, and up to 9.1.6 surround.

How to read each preset entry

Format is: **Name** *RT / Size / Pre-delay / Algo* — what it is, what it's for, and (where useful) what to nudge.

Pro Picks at a Glance

From LiquidSonics' interviews with working mixers and from forum consensus. Treat these as starting points — none of them stay on factory settings.

Engineer / Use case	Preset(s)
---------------------	-----------

George Shilling (music) — natural air on anything	Rooms 1 / Large Wooden
Andy Bradfield (film/music) — go-to hall + plate	Halls 1 / Large Hall · Plates 1 / Dark Plate
James Richmond (composer) — V1 loyalist	Plates 1 / Snare Plate A + B · 'Medium' Chamber/Room · SM Interiors / Adjacent Floor
Simone Coen (mix/post) — chamber classics	Chambers 1 / Sunset Chamber · Vocal Chamber
Nuno Fernandes (mix) — orchestral hall	Halls 1 / Boston Hall A
Forum favorites — orchestra/score	Halls 1 / Sandors Hall · Amsterdam Hall · Mechanics Hall · Spaces 1 / Scoring Stage
Forum favorites — vocals	Chambers 1 / Vocal Chamber · Sunset Chamber · Plates 1 / Vocal Plate · London Plate
Forum favorites — drums	Rooms 1 / Studio B Close · wooden rooms · Plates 1 / Snare Plate A/B · Nonlinear A–D
Forum favorites — strings	Rooms 1 / Studio B Far · Plates 1 / London Plate · Chambers 1 / A&M Chamber

Ambiences 1 (V1)

Low-decay programs designed to add space without adding obvious reverb. Workhorses for dialog, ADR, and adding 'air' to dry vocals. All V1 — static, realistic.

01 Large Ambience 0.80s / 15 / 10ms / V1

Spacious 'air without reverb' — adds room without obvious tail. Default top-pick for adding dimension to dialog beds and solo instruments.

02 Med Ambience 0.65s / 8 / 2ms / V1

Mid-sized version of 01. Sits behind close-mic'd sources without crowding. Try at low send level under acoustic guitar.

03 Small Ambience 0.45s / 4 / 0ms / V1

Tight, close ambience for ADR sit and dry vocals that need just a hair of space.

04 Large & Dark 1.00s / 15 / 10ms / V1

Same shape as 01 but with HF rolled at 3.2k — feels like an absorbed room. Good under spoken word.

05 Medium & Dark 0.90s / 8 / 2ms / V1

Dark mid-ambience. Soft glue for orchestral cues that don't need brilliance.

06 Small & Dark 0.50s / 3 / 0ms / V1

Dark, very tight. Drops sources back without adding shine.

07 Large & Bright 0.95s / 15 / 10ms / V1

Open, lifted 8k. Adds sparkle to thin sources; can sit underneath shaker/hat overheads.

08 Med & Bright 0.75s / 8 / 2ms / V1

Bright mid-ambience — useful behind sax, brass, bright vocals.

09 Small & Bright 0.40s / 4 / 0ms / V1

Tight and airy. Brings forward sources back into the picture without dulling them.

10 Deep Ambience 1.00s / 24 / 20ms / V1

Size 24 with 20ms pre-delay — depth without much tail. Cinematic interior scenes.

11 Long Ambience 1.15s / 25 / 10ms / V1

The longest of the V1 ambiences. Bridges into Spaces territory; useful on whispery vocals.

12 Clear Ambience 0.70s / 15 / 6ms / V1

Low diffusion (2), zero density. Clean, transparent — a default 'invisible reverb' choice.

13 Heavy Ambience 0.55s / 7 / 6ms / V1

Very dense (density 2, diff 0), short. Thickens drum overheads and percussion stacks.

14 Bass XXL 1.25s / 30 / 0ms / V1

Special-purpose: low-pass at 200Hz. Layer under a kick or 808 for sub bloom — high-pass everything else.

15 Percussion Air 0.50s / 3 / 0ms / V1

High diffusion (10), density 7. The 'air' send on a drum bus — sparkles without lengthening the kit.

Chambers 1 (V1)

Plaster/wood echo-chamber simulations — the studio chamber tradition (Capitol, A&M, Abbey Road). Sit between rooms and halls in size, very dense, mid-forward.

01 Large Chamber 1.40s / 5 / 10ms / V1

Classic plaster-chamber simulation, big version. Generic chamber send when you want body.

02 Medium Chamber 1.25s / 3 / 4ms / V1

Slightly tighter. James Richmond's go-to ('I just pick the one named Medium').

03 Small Chamber 1.00s / 2 / 0ms / V1

Compact chamber feel — great on acoustic instruments that need warmth without long bloom.

04 Large & Dark 1.50s / 5 / 0ms / V1

Damped chamber. Strings, brass swells, anything that shouldn't bite.

05 Small & Dark 1.20s / 3 / 0ms / V1

Darker compact chamber — soft glue for piano in a dense mix.

06 Large & Bright 1.60s / 5 / 10ms / V1

Tiled-chamber brightness. Snare and rim hits sit on top of this.

07 Small & Bright 1.00s / 3 / 0ms / V1

Very bright, very tight — for clave, hi-hat detail, glock.

08 Kick Chamber 0.70s / 10 / 0ms / V1

Tuned for kick: short, very dense (density 10), warmth around 640Hz LF. Send the kick alone.

09 Snare Chamber 1.20s / 3 / 10ms / V1

The snare-send chamber. Slap before the tail. Pair with a plate for blend.

10 Vocal Chamber 1.60s / 3 / 0ms / V1

Simone Coen favorite. Encapsulates the chamber sound on vox without crowding. Try a 20–40ms predelay extension.

11 A&M; Chamber 2.20s / 15 / 20ms / V1

Modeled on the famous A&M; Studios chamber in Hollywood. Strings, vocals — '70s-era smoothness.

12 CD Chamber 1.90s / 9 / 20ms / V1

Higher density (7), modulation 5 — a pop-mix chamber. Lush enough to sit under vocals as a main reverb.

13 Deep Chamber 1.90s / 8 / 0ms / V1

No modulation, high diffusion. Realistic and stable for orchestral chamber music.

14 Amb Chamber A 1.65s / 20 / 0ms / V1

Large, ambient-leaning chamber. A whole-mix send option for indie/film cues.

15 A&M; Chamber B 2.20s / 15 / 20ms / V1

Variant of A&M; Chamber with a late delay (340ms) baked in. Adds slap-back layer on long sustains.

16 Old Chamber 2.40s / 5 / 0ms / V1

Long, dark, mid-heavy (LF mult x1.25) — vintage vibe. Tape-era pop ballads.

17 Sunset Chamber 2.15s / 3 / 20ms / V1

Simone Coen pick. Long, warm, low diffusion — 'characterful but never overwhelming.' Vocal classic.

18 Amb Chamber B 1.50s / 15 / 0ms / V1

Sister to 14 — slightly shorter and less ambient. Strings sit naturally in it.

19 Stone Chamber 1.70s / 8 / 10ms / V1

Hard surfaces. Pre-delayed late delay 236ms. Acoustic instruments in a hard-walled room.

20 Tiled Chamber 1.70s / 6 / 10ms / V1

Bathroom-tile shimmer. Distinct early reflections (pattern 15). Bright vocal effect or post-FX.

21 Fat Chamber 1.60s / 6 / 10ms / V1

Density 7, LF mult x1.35 — fat low end. Drum bus warmer.

22 Echo Chamber 1.90s / 10 / 10ms / V1

Late delay 348ms — built-in slapback. Vintage vocals, dub-adjacent uses.

Halls 1 (V1)

The crown jewels — realistic concert-hall captures including named venues (Boston Symphony, Vienna Musikverein, Berlin Philharmonie, Mechanics Hall, Troy Hall). Start with Large Hall, then audition the named ones.

01 Large Hall 2.20s / 28 / 10ms / V1

Andy Bradfield's go-to. Big, neutral, accurate hall. Default M7 hall — start here for orchestra and acoustic music.

02 Medium Hall 1.80s / 23 / 24ms / V1

Tighter sibling to 01. Chamber-music sized concert hall.

03 Small Hall 1.40s / 6 / 0ms / V1

Small recital-hall feel. Great on solo piano.

04 Large & Near 2.20s / 20 / 10ms / V1

Same length, closer perspective (no early late-delay, less HF roll). Front-of-orchestra seat.

05 Medium & Near 1.80s / 20 / 24ms / V1

Closer mid-hall. Pop strings and brass.

06 Small & Near 1.40s / 6 / 0ms / V1

Close perspective in a small hall — solo voice or acoustic guitar.

07 Large & Dark 2.15s / 20 / 0ms / V1

HF rolled at 4.8k — the hall after the audience has soaked up the highs.

08 Large & Deep 2.15s / 25 / 40ms / V1

40ms pre-delay = audience perspective from the back. Cinematic strings.

09 Medium & Deep 1.80s / 15 / 20ms / V1

Mid-hall, mid-rear seat. Stays out of the way of close vocals.

10 Concert Hall 2.20s / 20 / 18ms / V1

Low modulation, low diffusion. A classic 'Bricasti hall' sound — orchestral defaults.

11 Gold Hall 1.80s / 23 / 30ms / V1

Low diffusion, very bright (HF rolloff 15.2k). Lifts the top on orchestral and choral work.

12 Sandors Hall 2.60s / 20 / 20ms / V1

Long, dense. Pop strings and big choral cues — frequently named as a vocal hall.

13 Dense Hall 2.00s / 18 / 10ms / V1

Density 6, modulation 9 — thick and lush. Modern cinematic hall.

14 Clear Hall 2.20s / 10 / 0ms / V1

No modulation, low diffusion. Transparent, almost church-like — leaves source intact.

15 Brass Hall 2.00s / 15 / 20ms / V1

Tuned for brass — HF rolloff 8.4k preserves bite. Try with horns and trombones.

16 Amsterdam Hall 2.30s / 12 / 0ms / V1

Inspired by the Concertgebouw. Often used as an overall mix reverb.

17 Berliner Hall 2.50s / 7 / 0ms / V1

Berlin Philharmonie-style. Tighter size (7), longer tail — vineyard-shaped hall feel.

18 Boston Hall A 2.10s / 10 / 0ms / V1

Symphony Hall, Boston — empty (no audience). Brighter, longer high-end. Nuno Fernandes pick.

19 Boston Hall B 1.80s / 12 / 0ms / V1

Same hall with audience. Shorter, warmer — more commonly chosen of the two.

20 Chicago Hall 2.10s / 20 / 0ms / V1

Orchestra Hall, Chicago. Tighter highs than Boston A.

21 Vienna Hall 2.30s / 7 / 0ms / V1

Musikverein. Compact size, long tail — the iconic shoebox hall sound.

22 Worcester Hall 2.25s / 8 / 0ms / V1

Mechanics Hall, Worcester MA (favorite of US classical engineers). Very warm low end (LF mult x1.4).

23 The ArchDuke 1.80s / 7 / 0ms / V1

Named for Beethoven's 'Archduke' trio. Chamber-music hall.

24 Troy Hall 2.30s / 10 / 10ms / V1

Troy Music Hall (Troy Savings Bank, NY) — legendary classical venue. Bright, generous.

25 Saint Sylvain 3.50s / 8 / 10ms / V1

Long cathedral-style space. Choral, organ, ambient.

26 Mechanics Hall 2.25s / 10 / 0ms / V1

The named Mechanics Hall capture (separate from Worcester). Late delay 428ms — slap built in. Often cited as a reverb-chain staple.

27 Saint Gerold 3.00s / 10 / 10ms / V1

Small Austrian abbey (Propstei St. Gerold). Long, dark, intimate sacred space.

28 Pepes Hall A 1.90s / 10 / 30ms / V1

Modulated (0) but low diffusion. Pop-band practice-room vibe — drums sit well.

29 Pepes Hall B 1.90s / 10 / 30ms / V1

Variant of A with late delay (300ms) and modulation. Vocal bloom.

30 Reflect Hall A 2.30s / 7 / 0ms / V1

Reflection-heavy hall — late delay 444ms baked in. Pre-delayed slap effect.

31 Reflect Hall B 2.25s / 22 / 20ms / V1

Bigger size, late delay 300ms. Cinematic with built-in echo character.

32 Piano Hall 2.00s / 16 / 24ms / V1

Specifically tuned for solo piano. Try on a stereo piano send first.

Plates 1 (V1)

Metal-plate simulations. Density-heavy, pre-delay-friendly. Where the M7's non-modulated character shines — these don't wobble like a Lexicon plate.

01 Bright Plate 2.00s / 4 / 0ms / V1

Generic bright plate — top-end shimmer. Vocals, snare.

02 Dark Plate 1.50s / 4 / 0ms / V1

Andy Bradfield favorite. Warm, contained plate — drums, vintage vocals.

03 London Plate 1.80s / 4 / 0ms / V1

Famous EMT-style emulation. Density 10 — the 'classic record plate'. Strings, vocals.

04 Snare Plate A 1.20s / 10 / 0ms / V1

James Richmond go-to. Bright, dense — built for snare send.

05 Snare Plate B 1.00s / 10 / 20ms / V1

Pre-delayed sibling — gives the snare crack a moment before the plate blooms.

06 Vocal Plate 1.50s / 5 / 24ms / V1

The vocal plate — warm with 24ms pre-delay built in.

07 Old Plate 1.25s / 6 / 0ms / V1

Vintage plate — less dense, more grain. Reads as 'tape-era'.

08 Rich Plate 1.90s / 5 / 0ms / V1

Diffusion 8 — extra-lush plate. Doubles as a chamber substitute for big strings.

09 Gold Plate 1.80s / 10 / 0ms / V1

Bright, larger plate. Brass, horns, electric piano.

10 Dense Plate 1.70s / 3 / 0ms / V1

Density 10 — very thick, no holes. Lead vocal in a sparse track.

11 Silver Plate 2.00s / 8 / 10ms / V1

Brighter than Gold (HF 8.8k). Solo lines and woodwinds.

12 Percussion Plate 1.10s / 2 / 0ms / V1

Short, dense, modulated. Congas, shaker, tambourine.

13 Echo Plate 1.70s / 3 / 60ms / V1

60ms pre-delay — slapback into plate. Old-school rockabilly vocals.

14 CD Plate A 1.70s / 8 / 0ms / V1

Modulation 10 — the lushest of the plates. Modern-pop vocal default.

15 CD Plate B 1.60s / 7 / 0ms / V1

Less modulation, more LF (mult x1.3). Body for drum bus.

16 Large Plate 2.20s / 10 / 0ms / V1

Just a big plate. Long sustain — gets you a snare wash.

17 Small Plate 0.90s / 5 / 0ms / V1

Tight plate — guitar slides, harmony stacks.

18 Fat Plate 0.95s / 5 / 0ms / V1

Modulation 9, LF mult x1.2. Bassy short plate — kick drum or low toms.

19 Crystal Plate 1.35s / 17 / 18ms / V1

Very bright (HF 12k). Aerial, glassy — chimes, glock, vocal harmonies.

20 Sun Plate A 2.55s / 2 / 0ms / V1

Long, warm-bright. Lead vocal main reverb option.

21 Sun Plate B 2.55s / 2 / 0ms / V1

More modulation than A. Lusher on the same chassis.

22 Sun Plate C 2.15s / 3 / 0ms / V1

Shorter, brighter Sun. Snare and high-tom send.

23 Vocal Plate B 2.30s / 2 / 0ms / V1

Pre-delayed late delay (260ms) baked in. Adds depth to a center vocal.

24 Repro Plate 1.90s / 10 / 0ms / V1

Reproduction/archive plate. Late delay 276ms. Vintage record sound.

Rooms 1 (V1)

The largest bank — tracking rooms, studios, wooden rooms, themed rooms (color-coded), and named live spaces. Default home for drum bus and acoustic instruments.

01 Studio A 0.70s / 2 / 4ms / V1

Tracking-room A — bright (HF 8.4k), close. Snare and rim sound natural.

02 Studio B Close 0.75s / 2 / 0ms / V1

Density 10, no pre-delay — wood-floor close mic. Forum favorite for drums.

03 Studio B Far 0.65s / 5 / 0ms / V1

Same room, room-mic perspective. String and acoustic-guitar staple.

04 Studio C 0.55s / 2 / 0ms / V1

Smaller live room. Tight kit ambience.

05 Studio D 0.45s / 5 / 0ms / V1

Very short, low diffusion. Drops sources into a room without obvious tail.

06 Studio E 1.00s / 1 / 0ms / V1

Slightly longer studio room — solo instruments.

07 Deep Stone 1.20s / 5 / 20ms / V1

Hard-stone surface character. Hand percussion.

08 Music Room 1.00s / 20 / 0ms / V1

Larger than 'Studio' but smaller than a hall. Mid-room piano.

09 Heavy Room 0.60s / 5 / 0ms / V1

Density tight, very bright. Rock guitar amp send.

10 Large Wooden 1.20s / 6 / 0ms / V1

George Shilling: 'Just sounds really natural for a bit of air around anything.' Set-and-forget.

11 Small Wooden 0.60s / 5 / 0ms / V1

Tighter wood. Cello, viola da gamba — string warmth.

12 Large Tiled 1.20s / 10 / 0ms / V1

Bathroom on steroids. Bright, persistent — a snare send option.

13 Medium Tiled 1.00s / 4 / 0ms / V1

Mid tiled space. Vocal-double slap.

14 Small Tiled 0.70s / 0 / 0ms / V1

Tight, very bright. The classic 'shower' for FX.

15 Drum & Chamber 1.20s / 10 / 60ms / V1

60ms pre-delay + modulation 10. Engineered for drum bus.

16 Djangos Room 0.80s / 2 / 4ms / V1

Small intimate jazz-club feel. Acoustic guitar and stand-up bass.

17 Small Vox Room 0.95s / 0 / 0ms / V1

Vocal booth simulation — LF mult x1.75. Thickens dry vocal.

18 Glass Room 0.80s / 3 / 0ms / V1

Hard, reflective, modulated. Synth pads sparkle in it.

19 Percussion 0.70s / 3 / 0ms / V1

Short room tuned for hand-percussion send.

20 Marble Foyer 1.25s / 8 / 10ms / V1

Hard hallway/foyer. Foley, footsteps.

21 Large Q Room 2.60s / 20 / 0ms / V1

Big tracking room — almost hall length but with room character.

22 Small Q Room 1.20s / 10 / 10ms / V1

Compact 'Q room'. Live-band overall.

23 Large Red Room 1.00s / 4 / 0ms / V1

Color-coded session room — bright, lively.

24 Red Room 0.40s / 0 / 0ms / V1

Short, very bright. Add air on a too-dry vocal.

25 Blue Room 0.60s / 2 / 0ms / V1

Smaller, slightly darker. Synth treatment.

26 Large Room 1.10s / 5 / 0ms / V1

Generic large room — neutral starting point.

27 Small Room 0.60s / 0 / 0ms / V1

Despite the name, doesn't sound small. Forum tip: brass instruments.

28 Front Room 0.40s / 2 / 0ms / V1

Front-of-stage perspective on a small space.

29 Center Room 0.50s / 3 / 2ms / V1

Middle-of-room perspective. Dialog.

30 Back Room 0.55s / 4 / 4ms / V1

Rear of room — early reflection pattern 7 reads as more distance.

31 Studio K 0.20s / 2 / 6ms / V1

Very short slap. Doubling effect on guitars.

32 Waits Room 0.85s / 4 / 10ms / V1

Tom Waits-style dusty room. Brass and harmonica.

33 Corn Room 2.30s / 10 / 24ms / V1

Long, very dark room (HF mult x0.4 down to 320Hz). Spoken-word and FX.

34 Oakland Room 1.45s / 15 / 20ms / V1

Bay Area live-room capture. Drums.

35 SF Perf Room 1.50s / 10 / 20ms / V1

San Francisco performance space. Acoustic ensembles.

36 Long Wood Room 1.20s / 6 / 0ms / V1

Variant of Large Wooden with late delay (236ms). Adds depth without lengthening.

Spaces 1 (V1)

Churches, outdoor venues, caverns, and FX spaces. Where the M7 stretches into very long and very unusual territory. Watch out — Europa is 25 seconds long.

01 North Church 3.20s / 11 / 0ms / V1

Mid-sized church — modulated, dense. Choral, acoustic guitar fingerpick.

02 East Church 3.30s / 15 / 0ms / V1

Brighter church, longer. Choir, organ.

03 South Church 3.90s / 12 / 0ms / V1

Long, darker. Deep choral.

04 West Church 5.40s / 20 / 0ms / V1

The biggest church — cathedral length, dark.

05 Cinema Room 0.45s / 0 / 4ms / V1

Small theater. Diffusion 8 — surprisingly dense. Dialog room sound.

06 Scoring Stage 2.20s / 18 / 0ms / V1

Hollywood scoring-stage emulation. Used by score mixers as orchestral default.

07 Bath House 3.90s / 15 / 6ms / V1

Long, dense, modulated. Choir of bathers — actually a great vocal effect.

08 Car Park 3.50s / 30 / 48ms / V1

Hard concrete reflections, pre-delay 48ms. Industrial FX.

09 Arena 2.30s / 28 / 80ms / V1

Pre-delay 80ms = audience distance. Live concert simulation.

10 Redwood Valley 1.90s / 30 / 220ms / V1

Massive pre-delay (220ms), darker top. Outdoor canopy.

11 Tanglewood 3.00s / 30 / 20ms / V1

Boston Symphony's outdoor summer home. The 'open-air shed' sound.

12 Academy Yard 3.50s / 30 / 300ms / V1

300ms pre-delay — outdoor courtyard distance.

13 Hillside 8.00s / 30 / 300ms / V1

8-second tail. Mountain echo, ambient music.

14 Cavern 4.00s / 18 / 0ms / V1

Stone-cavern dark — LF mult x4. Deep mythological scoring.

15 Stone Quarry 5.10s / 15 / 0ms / V1

Open quarry — long, dark, vast. Industrial soundscape.

16 Europa 25.00s / 30 / 0ms / V1

25-second tail. Special FX only — use the early/late mix to keep it sane.

17 Gated Space 1.50s / 12 / 32ms / V1

Built-in gated character. Eighties drum FX.

18 Reflect Chapel 3.80s / 22 / 0ms / V1

Long chapel with late delay 340ms — pre-built echo character.

19 Reflect Church 4.00s / 25 / 0ms / V1

Bigger sibling — late delay 500ms. Ambient sustain washes.

SM Interiors (V1)

Designed by the M7's hardware engineer at Todd-AO for film post. Architectural interiors with deliberate character — adjacent rooms, tunnels, garages, kitchens. Match these to on-screen rooms; for off-screen sources they read as 'somewhere else'.

01 Adjacent Floor 0.55s / 7 / 0ms / V1

James Richmond pick for FX. LF mult x1.65 — the room downstairs. Post and dialog.

02 Adjacent Room 0.55s / 16 / 0ms / V1

Through-wall character. HF mult x3.5 at 11.2k — muffled treble. Voices in the next room.

03 Backstage 0.55s / 16 / 0ms / V1

Behind-the-curtain perspective. Off-mic source.

04 Bedroom 0.30s / 0 / 0ms / V1

Small soft room. Pillow-y.

05 Small Tunnel 1.70s / 30 / 92ms / V1

92ms pre-delay — long, narrow space. Train tunnel FX.

06 Closet 0.35s / 0 / 0ms / V1

Tiny, dark — HF rolloff 720Hz. Hidden-source dialog.

07 Deep Well 4.20s / 13 / 332ms / V1

332ms pre-delay, 4s tail. Voice down a well.

08 Dining Room 0.40s / 0 / 4ms / V1

Density 10 — soft furnishings room. Dinner-party dialog.

09 Factory Floor 1.60s / 15 / 96ms / V1

High diffusion (9), modulation 10. Industrial interior.

10 Gym Bleachers 0.95s / 5 / 88ms / V1

Bright, hard, distant. Empty arena.

11 Kitchen 0.40s / 0 / 0ms / V1

Hard surfaces, short. Tiled-room dialog.

12 Locker Room 1.20s / 30 / 38ms / V1

Hard, bright, distant. Sports-film interior.

13 Parking Garage 2.70s / 30 / 172ms / V1

172ms pre-delay, long tail. Concrete car park — classic film noir.

14 Small Office 0.30s / 0 / 0ms / V1

HF rolloff 480Hz. Dead, carpeted, fluorescent.

Halls 2 (V2)

V2 algorithm halls — more modulation, brighter highs, more bloom. The pop-orchestral / cinematic side of the M7. Compare against Halls 1 on the same source to pick a side.

01 Large Hall 2.35s / 25 / 24ms / V2

V2 reading of a large hall — brighter, more modulated than Halls 1 / 01.

02 Large & Stage 2.30s / 27 / 24ms / V2

Stage-side perspective. Closer than 01, still long.

03 Medium Hall 1.75s / 17 / 24ms / V2

V2 medium — pop-string choice.

04 Med & Stage 1.75s / 22 / 24ms / V2

Closer mid hall.

05 Small Hall 1.15s / 15 / 24ms / V2

Small V2 hall — bloomy for its size.

06 Small & Stage 1.15s / 11 / 24ms / V2

Closer perspective. Often a vocal candidate.

07 Large Church 4.10s / 20 / 0ms / V2

V2 church — modulated, lush. Layer under V1 hall for depth.

08 Small Church 2.50s / 7 / 0ms / V2

Compact sacred space, modulated.

09 Jazz Church 1.35s / 15 / 0ms / V2

Shorter church — recital/sacred-jazz feel. Bright (HF 8.8k).

10 West Hall 2.20s / 15 / 0ms / V2

Cinematic West-Coast-style hall.

11 Concert A 2.00s / 18 / 64ms / V2

64ms pre-delay — distance-feel concert hall.

12 Concert B 1.90s / 15 / 26ms / V2

Closer Concert variant.

13 Live Hall 2.60s / 20 / 0ms / V2

Late delay 300ms — slap built into a long V2 hall. Pop-orchestral bombast.

14 Koncert Piano 2.00s / 18 / 24ms / V2

Solo piano-tuned V2 hall — late delay baked in. Try as-is on piano.

Plates 2 (V2)

V2 plates — modulated, denser than Plates 1. Modern record sound. Vocal Shimmer and Rich Plate A are the standouts.

01 Plate A 2.00s / 1 / 0ms / V2

Generic V2 plate — denser modulation than Plates 1. Modern pop.

02 Small Plate 1.50s / 3 / 0ms / V2

Tighter V2 plate. Snare doubling.

03 Snare Plate 1.20s / 3 / 20ms / V2

V2 snare-tuned plate.

04 Dark Plate 2.00s / 5 / 0ms / V2

V2 dark plate — warmer than Plates 1 / 02, more bloom.

05 Rich Plate A 2.00s / 3 / 0ms / V2

Diffusion 9, modulation 4. Cinematic vocal plate.

06 Rich Plate B 2.00s / 3 / 0ms / V2

Lower density, no modulation — more 'hardware-plate' feel.

07 Thin Plate 1.40s / 4 / 0ms / V2

HF rolloff 17.6k. Aerial, glassy.

08 Vocal Plate A 1.70s / 6 / 30ms / V2

30ms pre-delay — vocal default.

08 Vocal Plate B 1.50s / 10 / 20ms / V2

Late delay 276ms. Vocal with built-in echo color.

09 Drum Plate 1.35s / 5 / 0ms / V2

Late delay 196ms. Pre-built drum slap.

10 Large Plate 2.20s / 5 / 0ms / V2

V2 big plate. Lush snare.

11 Fat Plate 0.95s / 10 / 0ms / V2

Modulation 8, late delay 204ms. Low-end bloom.

12 Alpha Plate 1.90s / 7 / 0ms / V2

Diffusion 8 — dense but not over-modulated.

13 Vocal Shimmer 1.80s / 18 / 20ms / V2

Late delay 236ms + modulation 5. The 'cinematic vocal' plate.

Rooms 2 (V2)

V2 rooms and small chambers. Wide-feeling, lush versions of the Rooms 1 chassis.

01 Music Club 1.05s / 8 / 0ms / V2

Small live-music venue. Drum bus and vocals together.

02 Large Room 0.70s / 7 / 0ms / V2

Generic V2 large room — modulated, brighter than Rooms 1 / 26.

03 Med Room 0.55s / 6 / 0ms / V2

V2 mid room.

04 Small Room 0.40s / 0 / 0ms / V2

V2 small. Modulated — small but lush.

05 Lg Wood Room 1.20s / 6 / 0ms / V2

V2 take on Large Wooden — more shimmer.

06 Sm Wood Room 0.80s / 4 / 10ms / V2

V2 small wood. Acoustic guitar.

07 Large Chamber 2.00s / 6 / 10ms / V2

V2 large chamber. Modulated — pop strings.

08 Small Chamber 1.50s / 3 / 6ms / V2

V2 small chamber.

09 Bright Chamber 1.85s / 5 / 10ms / V2

Bright V2 chamber. Sax, brass.

10 Tiled Room 1.10s / 4 / 10ms / V2

V2 tiled room — modulation makes it 'lusher tile'.

11 Fat Chamber 1.35s / 5 / 10ms / V2

Density 10, modulation 8 — very thick. Drum bus.

12 Studio 1 0.75s / 0 / 0ms / V2

Bright tracking room.

13 Studio 2 0.60s / 3 / 0ms / V2

Slightly darker.

14 Studio 3 0.70s / 4 / 0ms / V2

Density 7, no diffusion stretch.

15 Studio 4 1.05s / 3 / 0ms / V2

Longer V2 studio room.

16 Guitar Room 1.20s / 18 / 0ms / V2

Late delay 300ms — pre-built slap for guitar amps.

17 Marble Room 1.30s / 3 / 0ms / V2

Hard surfaces, V2 modulation. Bright percussion.

18 Deep Chamber 1.90s / 10 / 10ms / V2

Late delay 364ms — long pre-built echo.

19 Dark Chamber 2.00s / 9 / 10ms / V2

Darker (HF rolloff 3.6k) + late delay 284ms.

20 Vocal Chamber 1.70s / 16 / 20ms / V2

V2 vocal chamber — denser/more modulated than Chambers 1 / 10. Late delay 340ms.

21 Wide Room 1.00s / 15 / 0ms / V2

Stereo-width emphasized. Pop drum bus.

22 Lush Room 0.90s / 25 / 0ms / V2

Size 25 packed into a short tail — wide and lush. Synth pads.

Spaces 2 (V2)

V2 long spaces — cathedrals, ambient washes, low-end-heavy variants (Big Bottom, Oak Ballroom). For pads, score, and bloom effects.

01 Open Space 2.10s / 27 / 180ms / V2
180ms pre-delay — open outdoor feel.

02 Med Space 1.40s / 10 / 0ms / V2
V2 mid-sized space — bright, lush.

03 Small Space 0.60s / 4 / 0ms / V2
Short V2 space.

04 Vox Ambience 1.70s / 20 / 0ms / V2
V2 vocal ambience. Late delay 252ms — bloom at phrase ends.

05 Big Bottom 1.45s / 25 / 0ms / V2
LF mult x4 — gigantic low end. Layer under sub-bass.

06 Cathedral 5.50s / 13 / 0ms / V2
Long V2 cathedral. Late delay 500ms. Choral and ambient.

07 Grand Stage 2.45s / 1 / 0ms / V2
Stage perspective — closer than the hall presets feel.

08 Lush Church 5.00s / 17 / 0ms / V2
Modulation 7. The lushest church — cinematic sacred.

09 Grand Church 5.00s / 10 / 0ms / V2
Smaller-size grand church — long tail, intimate width.

10 Concert Wave 5.00s / 14 / 0ms / V2
Late delay 692ms — wave-like sustain.

11 Long Vox Space 2.40s / 12 / 0ms / V2
Pattern 31 (most distant). Spacious vocal effect.

12 Dark Warm Room 1.00s / 15 / 10ms / V2
Dark, late delay 204ms. Spoken-word warmth.

13 Live Room 1.50s / 20 / 10ms / V2
Late delay 244ms + modulation 4. Pop drum room.

14 Shimmering Sky 8.40s / 28 / 0ms / V2
Long bright wash — pads, ambient music.

15 Oak Ballroom 7.00s / 30 / 0ms / V2
LF mult x2.1 — long bass decay. Big-room cinematic.

16 Ice House 8.00s / 25 / 0ms / V2
Bright (HF mult x1.0), very long. Soundtrack pad.

17 Ice Beads 5.50s / 20 / 24ms / V2
Very bright (HF 16k). Glassy, metallic sustain.

18 Music Forest 2.60s / 30 / 34ms / V2
Pattern 31 — distant. Forest ambience.

19 Waving Bloom 5.80s / 30 / 236ms / V2
236ms pre-delay, long bloom. Ambient lead-in.

20 Brick Chamber 0.70s / 21 / 0ms / V2
Short, hard-surface chamber — but size 21 keeps it wide.

Nonlinear

The M7's nod to the AMS RMX16. Four gated/reverse-style envelopes with identical 0.2s decay and varying early-reflection patterns. Eighties drum FX, special-use.

01 Nonlin A 0.20s / 7 / 0ms / Nonlin

AMS RMX16-style gated reverb, brightest of the four. Eighties snare and tom send.

02 Nonlin B 0.20s / 5 / 0ms / Nonlin

Brighter early reflections (HF 8k). Snare crack.

03 Nonlin C 0.20s / 7 / 0ms / Nonlin

Different early pattern (20 vs 0–9). Distant gated.

04 Nonlin D 0.20s / 7 / 0ms / Nonlin

Most distant early select (23). Reverse-style tom hits.

Tweak Playbook

V1 vs V2 — pick the right algorithm first

If a preset isn't sitting right, before reaching for EQ, check what algorithm you're on. V1 is static and realistic; V2 is modulated and lush. The same source can want either depending on context — a solo violin usually wants V1, a pop vocal usually V2. Many forum complaints about SHP 'sounding harsh' or 'too thin' resolve by switching to the matching preset in the other bank (Halls 1 / Large Hall vs Halls 2 / Large Hall, for example).

Early Select — the 32 reflection patterns

The Early Select dropdown has four subsets: **0–9** closest, **10–19** moderate distance, **20–25** further, **26–31** most distant. Within each subset, higher numbers are more reflective. So for a close-but-lively sound try pattern 8 or 9; for a distant but soft pattern try 26. Most factory presets sit in the middle (10–19) — shifting up or down a subset is the single biggest move you can make on perspective.

VLF — the third reverb engine

Beyond the Early and Late tail, the M7 has a Very Low Frequency engine running under 200 Hz with its own decay. Tuned to give body to small rooms without overwhelming large ones. Boost VLF to thicken a kick or 808; cut it if your low end is getting smeary in a hall preset.

Tail ducking — two modes

Pro's ducker has **Full** (ducks the whole wet signal) and **Late** (ducks only the late reverb, leaves Early + VLF intact). Late mode is the unsung hero for vocal reverb: it keeps a sense of place during phrases and only blooms the tail between lines. Pair with Sandors Hall or Vocal Chamber for a dead-obvious vocal-bus chain.

Frequency-dependent decay

Two multipliers (HF and LF) with crossovers. Realistic spaces have longer lows and slightly shorter highs — air absorption. For tightening: pull LF mult below 1.0 with the crossover around 300 Hz to shorten bass tail. For an empty/hard-surface character: raise HF mult toward 1.0 — high end persists. The factory presets already do this; look at the spec sheet column 'HF/LF RT Mult' to see how each preset is shaped.

Tempo-synced pre-delay

Click the metronome next to the Pre-Delay knob. 15 musical values including dotted and triplet subdivisions. Sync to 1/16 or 1/16T for a tight, groove-locked feel; 1/8 for vocals that want to breathe with the tempo. On classical work, leave it free.

EQ — Pro adds three bands

Standard SHP has HF rolloff and an LF cut on the reverb itself. Pro adds three more parametric bands. The combination lets you sculpt the tail without an external EQ — high-shelf cut at 8k for darker plates, low-shelf cut at 200 Hz for clarity on hall sends, narrow notch around 2.5 kHz to tame a harsh vocal plate.

Layering — two reverbs are not better than one (unless they are)

Classic move: short chamber/plate for the close perspective (Vocal Chamber, Old Plate, Studio B Close) and a longer hall on a separate bus for the tail (Sandors Hall, Boston Hall A, Mechanics Hall). Pre-delay the hall by 40–80 ms so it blooms after the chamber speaks. Pan the close-perspective reverb in stereo width and leave the hall wide.

Quick Starts by Source

Source	First preset to try
Lead vocal (pop/rock)	Plates 1 / Vocal Plate · Chambers 1 / Vocal Chamber · Plates 1 / CD Plate A
Lead vocal (classical/jazz)	Halls 1 / Boston Hall A · Chambers 1 / Sunset Chamber · Plates 1 / London Plate
Background vocals	Plates 1 / Rich Plate · Plates 2 / Vocal Shimmer
Snare	Plates 1 / Snare Plate A · Chambers 1 / Snare Chamber · Nonlinear A
Kick / 808	Chambers 1 / Kick Chamber · Ambiences 1 / Bass XXL (layer only) · Plates 2 / Fat Plate
Drum bus / overheads	Rooms 1 / Studio B Close · Ambiences 1 / Percussion Air · Rooms 2 / Lg Wood Room
Acoustic guitar	Rooms 1 / Large Wooden · Chambers 1 / Medium Chamber · Plates 1 / Old Plate
Electric guitar	Rooms 1 / Heavy Room · Rooms 2 / Guitar Room · Plates 1 / Gold Plate
Piano (solo)	Halls 1 / Piano Hall · Halls 1 / Boston Hall A · Chambers 1 / A&M Chamber
Strings (orchestral)	Halls 1 / Sandors Hall · Halls 1 / Mechanics Hall · Spaces 1 / Scoring Stage
Strings (pop)	Plates 1 / London Plate · Chambers 1 / A&M Chamber · Rooms 1 / Studio B Far
Brass section	Halls 1 / Brass Hall · Rooms 1 / Small Room · Plates 1 / Gold Plate
Choir	Spaces 1 / North Church · Halls 1 / Saint Sylvain · Spaces 2 / Lush Church
