

WASHINGTON PARK — VIDEO DISTRIBUTION REPLACEMENT

Good / Better / Best Purchasing Proposal · 3CDC Events/Production · September 9, 2026

CURRENT SYSTEM — JUST ADD POWER 2G

The three Washington Park TVs run on Just Add Power (JAP) 2nd-generation HDBaseT-over-IP transmitters and receivers — a mix of original and secondhand units, 4 to 10 years old, boxed inside the TV cabinets with no dedicated airflow, no service history, and no warranty. Just Add Power's own site confirms the 1G and 2G lines are sunset: **“1G and 2G product lines... are no longer available for purchase”** and “1G has now been sunset.” That's a dead platform — no new 2G hardware exists to buy, so a failed unit gets replaced with more unknown secondhand stock, same as what's in there now. And 2G tops out at 1080p60 with HDCP 1.4. No 4K.

Installation change — applies to all three options below: every encoder/decoder comes out of the sealed TV cabinets and relocates behind the wall, out of public sight, with open airflow around it. Heat inside those cabinets is the leading suspect in the failures driving this replacement, and new hardware sealed back into the same boxes just repeats it.

GOOD / BETTER / BEST — THE THREE OPTIONS

Tier	Hardware	Qty	Unit	Subtotal
GOOD NDI HX3	ZowieBox — 4K HDMI/NDI encoder-decoder (1 as sender, 3 as receivers)	4	\$199.00	\$796.00
BETTER Ubiquiti AV-over-IP	Ubiquiti EAV-Bridge — PoE+ 4K60 HDMI/XLR transceiver, works as source or destination (1 sender, 3 receivers)	4	\$299.00	\$1,196.00
BEST Full NDI	Magewell Pro Convert HDMI Plus (encoder) + Pro Convert for NDI to HDMI 4K (decoder x3)	1 + 3	\$655 / \$1,099	\$3,952.00

Shared infrastructure — added to every tier above, regardless of which is chosen:

Item	Qty	Unit	Subtotal
Ubiquiti USW-24-PoE network switch	1	\$379.00	\$379.00
Twozoh Ultra-Thin 25' HDMI cable	4	\$19.99	\$79.96

Switch is the 24-port PoE tier (95W total PoE budget vs. 42W on the 16-port) so it has real headroom to power all four units at once. Shows \$408.00 at checkout with Ubiquiti's current import surcharge included.

Total, all-in (hardware + switch + cables):

	GOOD	BETTER	BEST
Sender/receiver hardware	\$796.00	\$1,196.00	\$3,952.00
Switch + cables	\$458.96	\$458.96	\$458.96
TOTAL	\$1,254.96	\$1,654.96	\$4,410.96

NOTES ON EACH TIER

GOOD	NDI HX3, not full NDI — a compressed, lower-bandwidth variant. Plenty for three TVs pulling a static/looped feed. Each box is encoder <i>or</i> decoder, never both — fine for the 1-sender/3-receiver split.
BETTER	The EAV-Bridge runs Ubiquiti's own AV-over-IP protocol. It's PoE+ powered, any unit can be sender or receiver (more flexible than the ZowieBox's fixed roles), and it drops cleanly into UniFi network gear.
BEST	True full NDI at up to 4K60, with broadcast-grade build quality. Highest cost of the three by a wide margin — the case for it here is native 4K60 handling and headroom.

REFERENCE — WHAT STAYING WITH JUST ADD POWER WOULD COST

If we replaced like-for-like and stayed on JAP hardware, the current-catalog equivalent is JAP's **Omega Series** — the same 1080p/HDCP 1.4 tier as what's failing now, sold explicitly as the migration path off 2G. JAP doesn't publish list pricing (dealer-quoted, custom-install channel only), so treat this as directional, not a quote:

Item	Qty	Unit (dealer, approx.)	Subtotal
OM-705POE 1080p encoder	1	~\$750	~\$750
OM-505POE 1080p decoder	3	~\$750	~\$2,250
Switch + cables (same as above)	—	—	\$458.96
TOTAL (reference only)			~\$3,459

That's within a few hundred dollars of the **Best** tier above — for hardware that's still 1080p only and does nothing about the heat problem driving this replacement in the first place.

Pricing pulled 9/9/2026 from manufacturer/retailer sites (Amazon, Ubiquiti Store, B&H, an authorized JAP dealer) and is subject to change — confirm current pricing and stock before ordering.
